SUMMARY

- Senior software engineer with 6+ years of experience in front-end and back-end applications using TypeScript, JavaScript, Node.js, Python, AI, Java, and modern web frameworks across multiple domains.
- Led implementation of multi-tenancy fintech platform, including a billing system supporting large-scale bank transactions through credit cards and QR Code instant payments, with 11 million customers impacted.
- Indexed clusters of SQL databases with 300 million payment records, increasing search efficiency by up to 64%.
- Guided 30+ engineers through mentorship and architectural reviews to cultivate a high-quality culture and scalability.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, Solidity, and Golang.

Frameworks: React, Node.js, Next.js, NestJS, Express.js, FastAPI, Django, Playwright, Cypress, and Spring Boot.

Tools & Databases: Git, Terraform, CI/CD, AWS, EC2, S3, MCP, Lambda, Fargate, Docker, Kubernetes, Kafka, Claude Code, Cursor, OpenAI, Copilot, Codex, GitHub Actions, SQL, NoSQL, MySQL, Postgres, Elasticsearch, Redis, and MongoDB.

EXPERIENCE

Senior Software Engineer

Raro Labs

Remote

Aug 2024 – Present

- Crafted interfaces with React and Next.js that improved conversion rate by 27% for apps with 11 million customers.
- Implemented 70+ microservices and REST APIs for clients in health, fintech, sales, and aerospace industries, handling 500 million monthly requests using Node.js, Express.js, NestJS, TypeScript, Python, JavaScript, and Java.
- Increased deployment speed by 4x with CI/CD pipelines and caching techniques using Terraform, Docker, and ECS.
- Managed global resilient infrastructure in AWS with ownership of data-intensive microservices, load balancers, API gateways, SQL/NoSQL databases, Redis, JWT, Kafka, and Nginx.
- Introduced company-wide AI harness framework and trained 30+ engineers on how to use MCP, LLMs and AI agents.
- Led simultaneously 3 squads of engineers with strong ownership across multiple domains, ensuring DDD, clean code, observability, and quality (TDD) leveraging automated unit tests.

Software Engineer II

Raro Labs

Remote

Nov 2021 – Aug 2024

- Refactored Event-driven architecture (EDA) of a Rocket Launch System with Java, Spring Boot and PostgreSQL.
- Optimized development speed of interfaces by 200% after refactoring to React, Next.js, HTML5, and CSS3.
- Integrated REST APIs and microservices with global payment processors utilizing Node.js, NestJS, and TypeScript.
- Introduced testing culture, leading from 0 to over 80% automated test coverage on CI/CD pipelines with Jest, Playwright, and Cypress.

Software Engineer

Freelance

Remote

Dec 2020 – Dec 2021

- Designed and implemented an onboarding management system for Tech HR and recruiting teams, ensuring each employee's journey was tracked accurately using TypeScript, Node.js, and TypeORM.
- Created streaming platform with video player, websockets, and real-time actions in TypeScript and React.

EDUCATION

ENEB - European Business School of Barcelona

Master's Degree in Fintech and Blockchain

2026 - 2027

UniAmerica University Center

Bachelor's Degree in Computer Science

2021 - 2025
